BCS 2485 – NEWS NORTH

ELECTRICAL POWER SHUTDOWN

WATER PRESSURE MIGHT BE AFFECTED

Dear Residents,

MJR will perform another temporary electrical shutdown on the main supply to the building in order to facilitate the EV installation study. MJR Electric will be installing power monitoring equipment on the main electrical panel which requires a power shutdown during installation and removal.

TUESDAY, JULY 30, 2024

9 AM - 10 AM

Please be aware all power to the building, including residential suites, will be shut off for a period of up to 1(one) hour. The Strata recommends turning off any sensitive electronics ahead of time. To avoid possible damage caused by a power surge when power is restored, please ensure that all electronic equipment (i.e.: computers, printers, etc.) are shut off/unplugged. Also, if you have a monitored security system, you should advise the monitoring station of the shutdown as well.

Please note that the emergency generator will be running during the power shutdown which will still allow fob access and the elevator to continue running as well as the garage gate.

We appreciate your patience and cooperation in this matter.

Joan Bird, Senior Strata Manager

On behalf of the Strata Council – BCS 2485
